

Game Pitch Document

Otakar Kočí (xkocio00)

Title: Quick Coop Arena

Genre: Top Down Hero Shooter

Style: 2D, Top Down, Cartoon Pixel Art

Platform: Mobile, (possibly Web and Desktop)

Market: Teens - Adults Worldwide

Elevator Pitch: Team up with friends to eliminate your enemies in a Top Down Arena, where only tactics, crafting and mastery of the terrain can give you an edge.

The Pitch

Some might say that this is another Brawl Stars? No! It's NOT! Well, ... maybe. We are talking about a hybrid game where you and your friends will choose your heroes (no god powers like a Thor or others, but different stats and a set of skills that might come useful) and then fall into an arena, where you will need to gather resources, craft ammo, gear and other goods and improve your base to stay alive and slain the enemy (and burn their base too). When it comes to slaying the enemy, well, you have many options. You can choose a knightly approach and valiantly knock on your enemy's house, but your armor might not be very useful when your dishonorable enemies, who are hiding in the bushes, jump at your back and stab you in the neck with a thief's knife. It might be better to become the thief at that point. Or you can find a higher ground and show dominance over your enemy. This time a bow or a musket might be better than a light saber though. So you have many options, and you win when all your enemies are dead. Plan accordingly, use your hero's skills and be a team. But most importantly, you will need to get to know the terrain! Because it's different each time you play! You do not want to let the enemy enter your base via a path you did not know even existed! Or, even worse, lose those precious ores hiding somewhere on the map, just because you are lazy to explore?! Well your fault, now you don't have the good gear...

Now lets switch to a bit more formal tone for the rest of the document...

General Description

The planned game is a 3v3 to 5v5 arena combat game, that combines usual gameplay elements known in the genre and games like Brawl Stars with new gameplay mechanics that include exploration, resource gathering, crafting, building, stealth and more. It's made with pixel art style and uses top down camera. Two teams are placed on a map that in its default form is a rectangle that contains three main areas - a base for team A, base for team B and a large central area where reside special resources and structures and where most of the contest takes place. A team base is a somewhat secure home for team members. It contains basic resource gathering spots (food, wood, ore, ...), crafting area for different types of products (food, medicine, ammo, bandages, tonics, ...) and gear (weapons, clothes and armor) as well as spots for gear upgrade. It also contains the place, where the player resurrects shortly after they die. The central part of the map covers majority of its size and contains spots with important resources (better ores, food with better stats, ...) and gameplay enriching structures. It's properties vary and are different in each game, but they always contain a mix of open and enclosed areas, choke points, and areas with varying terrain height.

Basic Gameplay

The players see the world from above - the game is a 2D plane. A player only sees his surroundings, which are limited to a cone in front and small circle around them. The visible area can significantly extend based on terrain height and thus allows the use of ranged weapons. Terrain features (cliffs, trees, ...) can occlude what the player can see. On the other hand high altitude spots or landmarks can be seen from far away. The audio effects are very important too as the player can hear various noises including footsteps, combat, flying arrows, crafting, building and more. The players do not share vision with their team. Thus communication over the internal voice chat or via external solution is crucial for the game.

Resources, crafting and products

Various resources are spread across the map. These can be classified based on rarity and usage. Food resources such as berries, grains, fish, game and more are needed by the players to survive and recover their health. Their rarity influences their effect strength (similar to Minecraft). The rest of the resources are used for building and crafting and include various types of wood, ores and other resources such as stone, and leather. Each resource is used in different crafting recipes and building blueprints. Generally, rarity influences the quality and strength of products and the hit points of buildings. Rare materials are also the only materials that can be used to upgrade gear. Crafted products include weapons, ammo, armor, clothes and cooked foods.

Building

Players can build defensive structures such as walls and turrets. They can also construct bridges to cross rivers and cavities. Lastly they can construct storage yards or build crafting areas outside of their base.

Combat and Gear

Combat includes both close range, long range and stealth. For these purposes, various types of weapons and ammo are available (bows, muskets, swords, shields, knives, ...). Players can also choose from large set of gear (armor and clothes). Each item has different strengths and weaknesses that supports different play styles and character stats.

Playable Characters

Players can choose from several characters. None has game breaking abilities, but each has its own set of unique traits and strengths and weaknesses. Some characters can heal others, be faster at crafting and gathering and less noisy when doing activities, but be weak at close range combat. Others might be significantly more powerful in close range fights or have the ability to cut down a tree in a single hit.

Gameplay Loop

The game is meant to be fast paced with duration ranging from 5 to 20 minutes. All activities should be quick with smooth feedback to the player and the game should encourage quick teamwork and communication. Main game loop and time composition is as follows:

explore – gather – craft – improve – fight – die – repeat

- **Early Game** – resource gathering, weak stats and gear, contest for resources in map center.
- **Mid Game** – decent stats and gear, contest stretches through the whole map as important resources in the center are wearing down and the importance of "high ground" increases.
- **Late Game** – best stats and gear, contesting gets closer to each team's bases. Only basic infinite resources in team bases and stockpiled goods are available.

Platform and audience

Targeted platforms are mainly mobile devices, which are followed by the desktop and web platform. Console support is not planned. The target audience is expected to be a bit more mature than in games such as Brawl Stars and ranges from teens to adults. Game wishes to develop teamwork and tactic skills.
